

Ice Cream Pictures (Responsive Layout)

Below are some pretty pictures of ice creams, beautiful and freely-usable images downloaded from the website [Unsplash](#). These images are placed in a single bootstrap `row g-1` (where the `g-1` adds a gutter size 1 between the images) composed of columns using a combined `col-sm-6 col-12`. The `col-sm-6` forces 2 images to be in a row on all screens sizes **except** very small ones (<576px) where the `col-12` forces the images to use all 12 column grid units and stack each image on top of each other. Each image has the class `img-fluid` applied to it, allowing it to resize to the size of the column.
