

Mobile User Enhancements

Goal: A mobile user on the go needs to quickly find the shop's phone number and address.

To meet this need, the site now uses a single-column layout on screens up to 767px wide. This ensures all content is presented in a logical, easy-to-scroll vertical flow, eliminating the need for horizontal scrolling or pinch-zooming. The navigation menu collapses into a JavaScript-powered "hamburger" menu to maximize screen space for important content. Most importantly, the contact information has been made interactive: the phone number is now a tel: link for "tap-to-call" functionality, and the address links directly to Google Maps.

A playful terror mix with a big personality. Great with kids and other dogs.

A sweet and gentle long-haired cat who enjoys cuddles and a warm lap.

Tablet User Enhancements

Goal: A new pet owner using a tablet wants to visually explore services and pets.

For the tablet experience (screens between 768px and 1024px), a two-column grid layout is introduced for the "Services" and "Adoption" sections. This makes better use of the wider screen, allowing users to see content side-by-side for a more engaging browsing experience. The navigation remains as a hamburger menu to maintain a clean, touch-friendly interface.

Desktop User Enhancements

Goal: A prospective adopter on a desktop wants to conduct detailed research and compare options easily.

On screens 1025px and wider, the layout expands to its full potential. The navigation bar becomes permanently visible as a horizontal menu for quick access to all sections. The "Services" section uses a three-column grid, and the "Adoption" section uses a four-column grid, allowing the user to view multiple items at once and easily compare them. CSS hover effects were added to links and buttons to provide visual feedback, enhancing the experience for mouse-and-keyboard users.
